

# LAND SYSTEMS

## SPECIAL PROJECTS AND SERVICES FOR LAND BASED SYSTEMS

**Van Halteren is the Dutch partner for Original Equipment Manufacturers (OEMs) for special projects relating to land based systems. In our facilities in Bunschoten, in the centre of The Netherlands, we have in-house capabilities to carry out various activities. We have production machinery, welding shops, assembly shops, transportation and test facilities available.**

Projects carried out by Van Halteren have included activities such as critical parts production, certified welding, integrated project management, supply chain management, warehousing, assembly, vehicle integration and final testing.

Since we have been involved in the production of different land based systems, we have acquired the knowledge and skills to provide vehicle related services as well. Van Halteren offers services and support activities throughout the complete vehicle life time. Service and Support activities are delivered to many locations, in The Netherlands and abroad. Most of our projects have been in close cooperation with the Government and OEMs. Van Halteren's role as a centre of excellence for land based systems, together with the OEM and the Government will increase the availability of vehicles, result in shorter turnaround times, be cost efficient and reduce the Government's workload.

**Capabilities:**

- CNC Machining
  - Certified Welding
  - Engineering
  - Project Management
  - Supply Chain Management; hub to Dutch Industries
  - Assembly & Integration
  - Testing
  - Service & Support
- References
  - CV9035NL Complete Turret Assembly and Vehicle Integration
  - CV9035NL Support
  - CV9035NL Critical Parts Production
  - Pzh2000 Turret and Cradle Production
  - BVS-10 VIKING Deployment for Afghanistan
  - BVS-10 VIKING Re-deployment
  - Bushmaster Reset activities and maintenance
